Message from the CEO ///

THE IMPORTANCE OF SERVING BETTER

Quality, Realization, Availability and Growth are words that identify us and that the market has come to acknowledge about PRF.

In fact, it is our first purpose to maintain a high standard of quality of service and safety in everything we do. However, sustained growth is also a PRF goal. Because of this, we continue growing into new markets, with new products and new technological solutions.

Growing brings more challenges to our organization, given the need for more skilled staff and more training, as well as another dimension of

support infrastructures, from offices, warehouses, workshops, etc.

Now that another important expansion of our headquarters has been completed, our competitiveness and capacity to produce more and better have been strengthened, and we are now able to embrace even more projects and become ready for new and bigger challenges.

We thank you for your confidence and invite all our partners to come and visit this new PRF.

Grand Opening///

PRF EXPANDS ITS SERVICE AREAS

PRF inaugurated a new service area in the first quarter of 2019, by largely expanding its headquarters building.

This expansion allows PRF, not only to duplicate the existing space for the provision of services, but also to enable the company to provide new services at the same time it targets new areas of business.

With the growth in terms of headcount, combined with the new services and increased equipment production, this new Polo allows PRF to reduce production times, improves the delivery logistics and also introduces new expertise areas, as well as improvements, ranging from Project Design to Remote Monitoring of various projects carried out by PRF.

This official opening was marked by a moment of homage to all the employees of the company and their families, who have contributed to the success of this project, in some cases, for decades.

Project References///

FIRST SATELLITE PLANT IN IRELAND

PRF carried out the design, engineering, construction, installation and start-up of what is the first LNG Satellite Plant to operate in this country, in partnership with PRIMALNG / CALOR IE.

This Plant also has a LNG transfer skid equipped with a cryogenic pump, so that it is possible to discharge LNG, which is transported in ISO containers by land and sea from the port of Rotterdam. The station supplies gas to one of the largest food industries producing milk powder.

PRF ARRIVES IN POLAND

New Markets

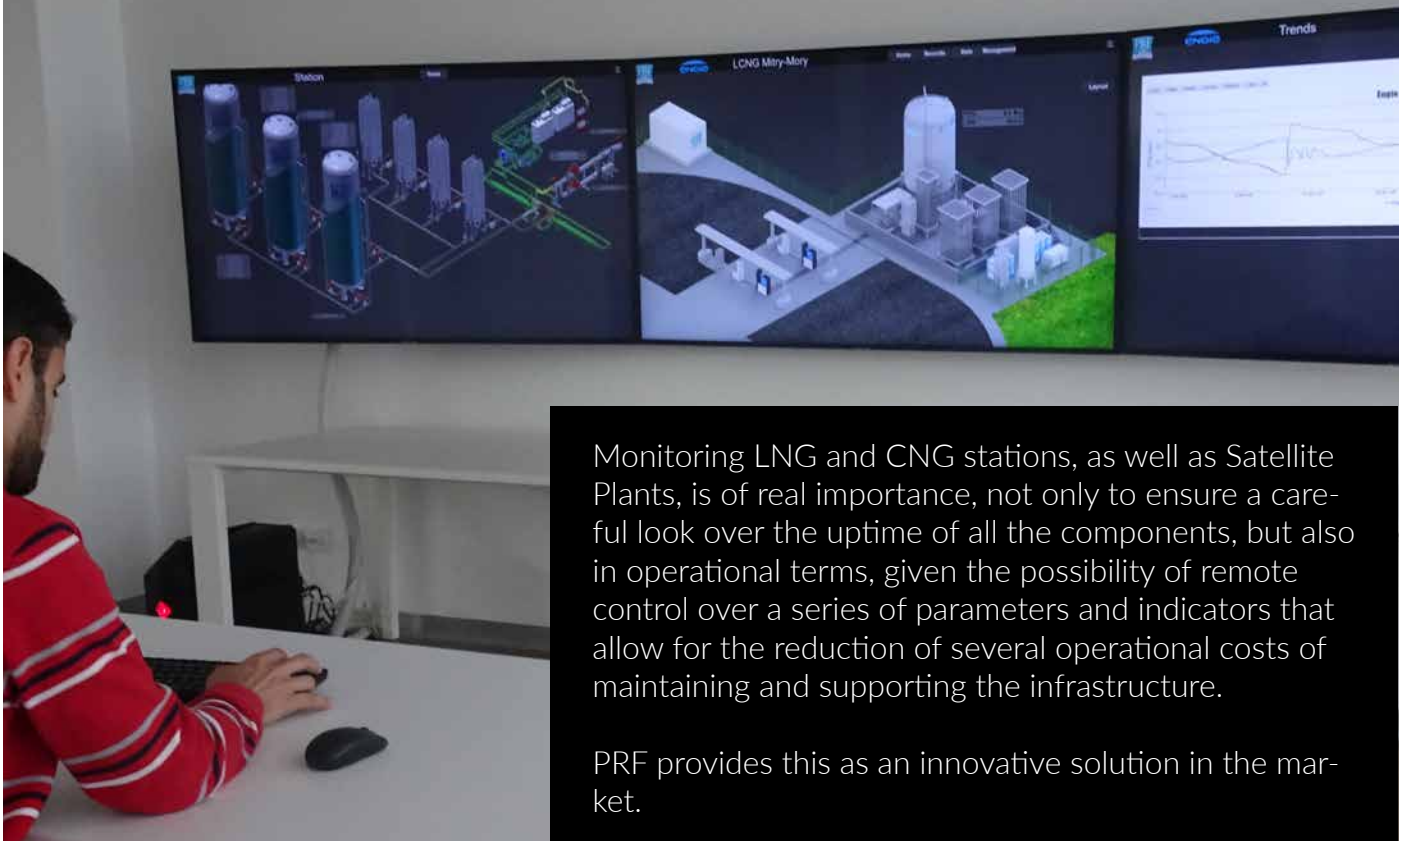

PRF comes to another market by having been awarded its first project in Poland.

Still in development stage, this project involves the creation, engineering and design, construction, installation and start-up of a Plant with a vertical LNG tank and atmospheric vaporization, in partnership with PRIMALNG / GASPOL.

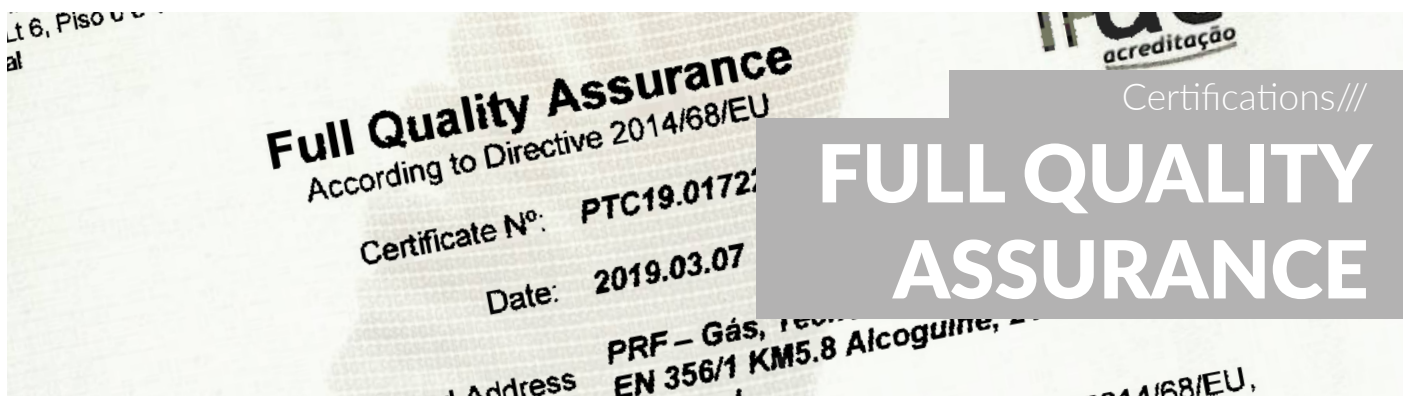

Service Highlight///

MONITORING & CONTROL SYSTEMS

Monitoring LNG and CNG stations, as well as Satellite Plants, is of real importance, not only to ensure a careful look over the uptime of all the components, but also in operational terms, given the possibility of remote control over a series of parameters and indicators that allow for the reduction of several operational costs of maintaining and supporting the infrastructure.

PRF provides this as an innovative solution in the market.

PRF has focused on certifying the quality of its services through ISO 9000 over many years, and so creating a culture of continuous process improvement.

In 2019, the company achieves another historic milestone by being granted Total Quality Assurance, which uniquely certifies its conception expertise of Pressurized Equipment Manufacturing, according to Directive 2014/68/EU.

ive 2014/68/EU,
system are in
ding module H.

For the second time, the Small-Scale LNG Summit brought together the entire value chain of LNG professionals.

The list of speakers included high-level experts, who shared their experiences, practises and knowledge on the LNG sector.

As a way to showcase its projects and position itself in a much more global market, PRF was present as an exhibitor in this exchange of knowledge.

Conferences & Expos///

SMALL SCALE LNG CONFERENCE

Milan 2019

Conferences & Expos///

SITL

Paris 2019

PRF participated actively in the 2019 edition of SITL, a logistics and transport trade show, and was part of the AFGNV (French NGV association), sector.

SITL is a large expo where the segment dedicated to NGV has been growing on a large scale, with the association represented with about 20 members on display, among them the PRF.

Sponsorship///

HYDROGEN CONFERENCES

Torres Vedras 2019

Hydrogen is a source of energy that has been taking a leading role in the various forms of renewable energy available.

Projects, looking over Hydrogen production and usage, are amongst the new areas of activity within PRF, being some innovative projects already underway.

As a way to help the dissemination of this energy source, PRF sponsored this event, organized by the Portuguese Association for the Promotion of Hydrogen.

For several days the use and application of Hydrogen, as an alternative energy source to the carbons, was debated by different panels of discussion, allied to various presentations and proposals, that seek solutions for the introduction of Hydrogen in the most diverse applications, from industry to end user consumers, with a focus on mobility.

DELIVERING PREMIUM SOLUTIONS TO THE GAS INDUSTRY
